Topic: [Alternative energy](#)

Go help [peakguy](#) out. A while ago on Peak Oil NYC [he suggested](#) that maybe the Statue of Liberty should be run on wind power. More concretely, he thinks GE should take some of their new-found [ecomagination](#) and volunteer a wind turbine for the project. He sent them a letter, and while he hasn't gotten a response yet, he's noticed new traffic on his site from the GE domain. Could it be that they're interested? [His post today](#) encourages us to give GE some feedback telling them what a good idea we think it is. Go read his post, and then [tell GE](#) you think it's a great plan.
