In our [last poll on 16 APR](#) (and [here's the old accompanying comment thread](#)), 42% of you predicted that CL would hit \$127 in the front month before it hit \$103. Yep, we've passed it today, though we closed below it. Oil has risen from \$115 to \$127 (~10%) in a month.

This is the comment thread for the poll, offer your conjecture and reasoning here...the [actual poll itself is at this link](#).
