Paul Kedrosky has been [Visualizing Global Oil Markets: 1965-2007](#) today. This looks to be a cool little tool (HINT: after putting the bottom pull down on "barrels", press play and watch the little blue ball get big...and yes, you can learn how to do this, click the bottom right corner for instructions).

I've been messing with the latest data from BP's 2008 Statistical Review of Energy Markets. Here is an animated look (via Google chart widgets) at oil consumption and growth therein across U.S., Asia and Europe from 1965 until today. For some reason it's not remembering to resize the bubbles based on market size (put size on "barrels" in the pull down), but works properly in the spreadsheet. For now you can pick the dimension via which you'd like to size the respective markets from the drop-down on the chart.
